

# PERMAVOID

## ATHLETIC FIELDS

Provides the ideal base for precision graded athletic fields for all levels of play.

Protects expensive synthetic infill turf fields by maximizing permeability and water storage thus preventing flotation forces.

Eliminate collector trenches and large diameter pipe, thus eliminating the issue of settlement that can create swales over time, a previously common problem in synthetic turf fields.

Eliminates consolidation and settlement concerns through high strength interconnected units and load distribution.

Full utilization of drainage stone using all the void space across the entire field.

Maximizes field and overall site LID & BMP performance through storage and infiltration.

Preliminary Water Control, allows for control of outflow at the beginning.
