

## **LEED Product Data Sheet**

2B3906 - Kwik Goal® Fusion 120 Goal

Materials and Resources (MR) Credit 4.1 and 4.2: Recycled Content

			Preconsumer Co	ontent (Post-
Component Material:	Postconsumer Content:		Industrial):	
Aluminum	18	%	36	%
Delrin	0	%	0	%
Polyethylene	0	%	0	%
Steel	0	%	0	%

Materials and Resources (MR) Credit 5.1 and 5.2: Regional Materials

Component Material:	Supplier Location:	Manufacture Location:	Distance Between Supplier & Manuf.  Locations (In Miles)
Aluminum	St. Augustine, FL	Quakertown, PA	Greater than 500 miles
Delrin	Macon, Georgia / China	Quakertown, PA	Greater than 500 miles
Polyethylene	Korea / India	Quakertown, PA	Greater than 500 miles
Steel	China	Quakertown, PA	Greater than 500 miles

## LEED for Schools Only:

Environmental Quality Credit 4: Low Emitting Materials (1-4 Points)

Option 1: Adhesives and Sealants

N/A

Option 2: Paints and Coatings

Powder Coating is a finishing process by which an electrostatically charged mixture of plastic resins, pigments and fillers are applied to a surface and cured under heat producing a highly durable finish. Considering Powder Coating does not include solvent-based wet paints, negligible amounts, if any, Volatile Organic Compounds (VOC's) are emitted into the atmosphere during the Powder Coating process. All unused or over-sprayed product can be recovered and reused, producing less waste. In addition, studies show that the Powder Coating process exhibits a reduction in CO<sub>2</sub> emissions against conventional solvent-borne coating systems. (Information Source: Common Knowledge/Industry Standard; Supplemental Information/Documentation Available On Website)

Option 3: Composite Wood

N/A

## **LEED for New Construction:**

Environmental Quality Credit 4.1: Low-Emitting Materials: Adhesives And Sealants (1 Point)

## Environmental Quality 4.2: Low-Emitting Paints and Coatings (1 Point)

Powder Coating is a finishing process by which an electrostatically charged mixture of plastic resins, pigments and fillers are applied to a surface and cured under heat producing a highly durable finish. Considering Powder Coating does not include solvent-based wet paints, negligible amounts, if any, Volatile Organic Compounds (VOC's) are emitted into the atmosphere during the Powder Coating process. All unused or over-sprayed product can be recovered and reused, producing less waste. In addition, studies show that the Powder Coating process exhibits a reduction in CO<sub>2</sub> emissions against conventional solvent-borne coating systems. (Information Source: Common Knowledge/Industry Standard; Supplemental Information/Documentation Available On Website)

Environmental Credit 4.4: Low-Emitting Material: Composite Wood (1 Point)
N/A
