FIELD EQUIPMENT

SportsEdge® offers a full line of field equipment and accessories. This includes a wide selection of football goals, tip-resistant soccer goals, safety ball stop netting, rubber edging that replaces concrete curbs, utility boxes...even player benches and portable bleachers.

FOOTBALL GOALS

SportsEdge offers a selection of football goals to suit any team's needs, including our patented **Rotating Football Goal**. All goals are available as sleeve or plate mount style and have all the adjustability necessary to make sure the goals are plumb, level and straight. Uprights come either 20' or 30' high.

6.5' OFFSET FOOTBALL GOALS

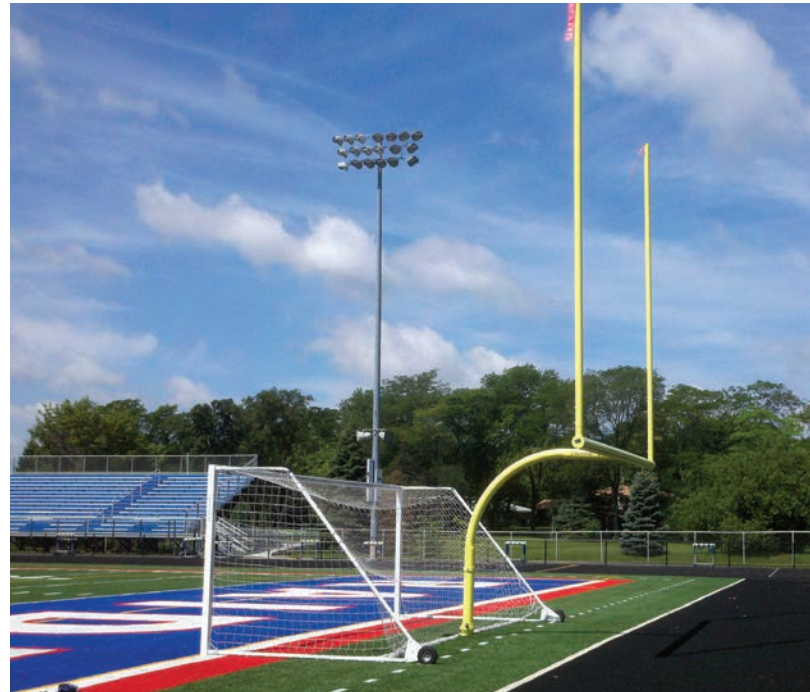

These goals are most often chosen for stadiums or football fields that play football only or that may have depth restrictions behind the end zone.

8' OFFSET FOOTBALL GOALS

Our most popular goal posts are a favorite for stadiums with multi-use football/soccer fields. The deeper offset allows more room for the soccer goal to be tucked in under the football goal. This is important for maintaining a full length (360') soccer field.

8' OFFSET ROTATING FOOTBALL GOAL

Our patented Rotating Football Goal Post solves a common problem on combination use fields. When football and soccer share a common end line, the football crossbar is directly over the soccer crossbar. Did the shot on goal strike the soccer or the football crossbar before rebounding back into the field of

play? When a forward pounces on the rebound and puts the ball in the back of the net, is it a goal?

The Rotating Football Goal addresses this by easily spinning 180° so that its crossbar is now 16' behind the goal line. The rotation takes one person only seconds and locks in place until returned to its original position. Fast, safe and easy!

8' OFFSET EXPANDABLE FOOTBALL GOAL

For fields that must accommodate high school as well as college level teams, the Expandable Football Goal crossbar is adjustable from 18'6" to 23'4". These goals meet NCAA and NFHS regulations.

ACCESS FRAMES

The Access Frame Kit provides easy access to the goal post sleeve or plate while eliminating trip hazards and keeping debris out. This kit can be used for both natural turf and synthetic turf fields. For synthetic turf fields, covers are wrapped on site with turf by the contractor.

GOAL POST PADS

SportsEdge Goal Post Pads are made with high density urethane foam and are available with a 13" or 18" thickness. All of our pads meet NCAA and NFHS safety standards.

Our Pro Series pads are six feet high and have a Velcro closure for easy installation. Pads for the Rotating Goals are made with extra padding to accommodate the rotator bearing mechanism.

SOCCKER GOALS

When we set out to manufacture our new **Soccer Goals**, the safety of children and soccer players was the driving force behind the design. Soccer goal tip-over has sadly been the cause of many deaths over the years. And although soccer goals should always be anchored, we designed our goals to be highly tip-resistant even if the goals were not properly anchored. Tested per ASTM F2673-08 our goals easily passed this stringent test.

The key elements of our goals include 10' deep backstays which improve stability and counterbalance, a rear-mounted wheel kit which extends the counterweight to 11' depth and ensure

that goals are lifted at the heavy end, for added safety.

Other features include an all-aluminum powder coated frame, flat-free polyurethane tires, an adjustable rear ground bar, and twist-in nylon net clips.

SOCCKER GOALS

ANCHORING SYSTEMS & COUNTERWEIGHTS

Soccer goal anchors and counterweights aid in preventing accidental tip-over of the soccer goal.

The SEF390 **Soccer Goal Anchor** (US Patent No. 8,968,123) is designed to be used for multi-use football and soccer field applications. The 4" wide stainless steel hooks fit on either side of the football gooseneck and securely anchor the soccer goal bar. The hooks are neatly stowed in the access frame when not in use. The aluminum or stainless steel components and the ratcheting anchor assembly are marine-rated.

The SportsEdge SE790 Soccer Goal Anchor is designed to be used for a stand-alone soccer field. This goal anchor has a single 12.5" wide hook that securely anchors the soccer goal bar.

ANCHORING SYSTEMS

BALL STOP

On modern multi-purpose facilities several sports may share the field. This situation can create interference and safety risks. Keeping stray balls contained with a SportsEdge ball stop system can alleviate these problems.

Ballstop Aluminum Safety Systems come in 20' wide sections and are available 10', 15', 20', 30' or 40' high. All systems come with ground sleeves. Pole diameter is increased as above ground height increases in order to appropriately counter wind loads. The largest poles are also available in steel for permanent, non-removable applications.

Black powder coating is standard. The vinyl covered steel cables running through the top and bottom of the net minimize sag and prevent balls from rolling underneath. The nets are weather

BALL STOP

treated and vary in specification by each application and system.

RUBBER EDGING

Athlete safety should be the paramount concern in the design and construction of athletic fields. The **FlexEdge Rubber L-Curbs** are manufactured specifically for safely bordering synthetic turf fields. The L-Curbs can be used as a continual rectangular border for a stand-alone field, as a divider between two synthetic fields, or across the D-Zone behind the goal area...anywhere there would otherwise be a concrete border. In every application, only resilient rubber is exposed at the surface.

Pre-manufactured 90 degree outside corners eliminate field fitting. And traditional synthetic turf nailers can be eliminated. The L-Curb can be made with

a 1.5" deep ledge on the outside that is used to attach the turf, contain the infill and minimize trip hazards.

The complete kit includes anchoring pins, joint sealant and a UV top coat with application tools. This high quality rubber product is built to last!

RUBBER EDGING

BLEACHERS

SportsEdge **Bleachers** are constructed using sturdy, lightweight materials and are available in a variety of materials, sizes and colors to suit your needs. All bleachers available from 15' to 27' long.

Our all-aluminum 3 and 4 row units are lightweight and stable. They use a strong aluminum understructure, 10" wide non-skid seat planks and are available in various lengths. Preferred models include double foot planks.

Combination aluminum & steel 3, 4, 5, & 10 row units employ dual braces and rear stabilizing bar. These units have a

galvanized steel understructure and offer widely variable capacities, depending on length. Optional chain link or guard rail safety fencing & aisles are also available.

BLEACHERS

PLAYER BENCHES

Standard benches are made in a variety of styles and lengths. Your choice of portable, permanent, or surface installed model, with or without backrests, galvanized or powder coated. Available 7.5' to 27' long.

Pro Player Benches offer extra support and comfort. Additional leg supports and cross-bracing add strength. Wider and higher seat plank are contoured for comfort. All of the same size configurations as in Standard benches are available.

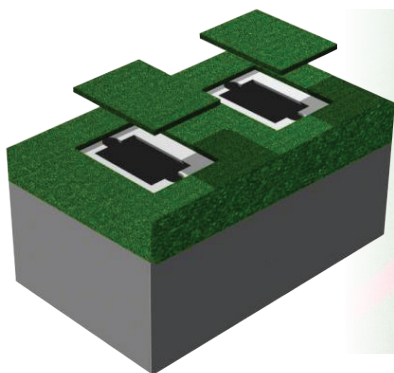

PLAYER BENCHES

UTILITY BOXES

The SportsEdge **Utility Box** is a multi-purpose junction box for in-field utility needs in athletic field construction. Applications may include AC power, public address & communications, lighting, scoreboards, cameras, timing and irrigation. Full-sized boxes include a center divider plate. Half-sized boxes are also available. All boxes have tethered removable hand holes.

A variety of models are available to accommodate almost any playing surface. Whether in a track surface, grass, asphalt pavement or artificial turf, there is a SportsEdge Utility Box to meet your needs. You can fill the cover with track material or synthetic turf depending on the location. SportsEdge can also provide black rubber mat fillers on request.

UTILITY BOXES

VISIT WWW.SPORTSEGE.COM

We are manufacturers of stormwater management and athletic field construction equipment for outdoor sports construction. If you are designing an athletic facility, our team can supply you with all of the supporting literature, details and specifications you need.

Visit www.sportsedge.com for styles, sizes, dimensions, cross sections, contact info and more for all of our products, all in downloadable format.
